## Use Oxycodone Only as Prescribed

Oxycodone should always be taken exactly as directed by your healthcare provider. Your prescribed dose is based on factors such as your medical condition, pain severity, previous opioid exposure, and overall health.

To promote safe use:

- Follow the prescribed dosage and schedule.
- Do not take extra doses unless instructed by your healthcare provider.
- Do not stop taking the medication abruptly without medical advice if you have been using it regularly, as this may lead to withdrawal symptoms.
- Contact your healthcare provider if your pain is not adequately controlled rather than adjusting the dose on your own.

## Choose a Licensed Online Pharmacy

If you purchase prescription medication online, use only a licensed pharmacy that complies with applicable laws and requires a valid prescription where legally required.

A reputable online pharmacy will typically:

- Verify your prescription.

More serious side effects, such as slowed or difficult breathing, severe allergic reactions, or extreme drowsiness, require immediate medical attention. If you experience symptoms that concern you, contact a healthcare professional promptly.

## Be Aware of Drug Interactions

Oxycodone can interact with other medications and substances. Before starting treatment, tell your healthcare provider and pharmacist about all prescription medications, over-the-counter products, vitamins, and herbal supplements you use.

Avoid combining oxycodone with alcohol or other medications that can increase sedation unless specifically directed by your healthcare provider, as doing so can increase the risk of dangerous side effects.

## Store Medication Securely

Because oxycodone has the potential for misuse, secure storage is important.

Consider these storage practices:

- Keep the medication in its original labeled container.
- Store it according to the instructions provided by the pharmacy.
- Keep it out of the reach of children and pets.
- Store it in a secure location where others cannot access it without permission.

Never share your prescription medication with another person, even if they appear to have similar symptoms.

collection sites that help prevent accidental exposure and reduce the risk of misuse.

Open communication helps support safe and effective treatment.
