Common Oxycodone Variants

Oxycodone products can differ by formulation and dosage strength. The following categories are provided for educational purposes and should not be interpreted as instructions for selecting or changing a prescription.

...

Immediate-Release Oxycodone Designed to release oxycodone relatively quickly and may be prescribed for certain episodes of acute or breakthrough pain.

Extended-Release Oxycodone Formulated to release medication over a longer period and is used only for specific pain-management situations under medical supervision.

Low-Strength Formulations Some prescription products contain lower amounts of oxycodone and may be used when a healthcare professional determines that opioid treatment is appropriate.

Higher-Strength Formulations Higher-strength products require particular care because increasing the opioid dose can increase the risk of serious adverse effects and overdose.

...

Why Different Strengths Exist

[Classic](#)[Home](#)

Common Side Effects

- Drowsiness or sleepiness
- Dizziness
- Nausea or vomiting
- Constipation
- Headache
- Reduced alertness

Serious Risks

Opioids can slow breathing. The risk may become substantially greater when oxycodone is combined with alcohol, sedatives, or other medicines that depress the central nervous system.

Never change your prescribed strength or schedule on your own. If your medication does not seem to control your pain adequately, contact your healthcare professional rather than taking additional medication.

Oxycodone and Drug Interactions

Tell your doctor or pharmacist about all prescription medicines, non-prescription medicines, and other substances you use. Some combinations can increase sedation or respiratory depression.

Possible Signs of Overdose

An opioid overdose can involve extreme sleepiness, inability to wake, very slow or stopped breathing, unusual breathing sounds, or blue, gray, or pale skin or lips.

Emergency: If an opioid overdose is suspected, seek emergency medical help immediately. If naloxone is available, use it according to its instructions while emergency assistance is being obtained.

Safe Storage and Disposal

Keep prescription opioids secured and out of reach of children and other people who have not been prescribed the medication. Follow local pharmacy or medication take-back
